

Austin™

Eat healthy. Stay healthy.

Sterilized Pulses, Vegetables, and Fruits
Ready-to-Eat Food and Cooking Pastes

Company Profile

Austin Foods & Beverages Pvt Ltd is a part of Avadh group that has a turnover of USD 150 million. The group's well diversified portfolio of businesses includes Infrastructure, Engineering, Power Energy, Polymer, distribution of Petroleum Products and Sterilized Canned Food. The group has also been engaged in contract-farming for more than 20 years.

Austin provides a range of Sterilized Pulses, Vegetables, and Fruits; its bouquet also includes growing varieties of Ready-To-Eat Food & Cooking Pastes.

Easy to cook,
delicious and
nutritious food

Our mission is to give happiness to every family through a variety of products that make food easier to cook and tastier to eat.

As a leading quality manufacturer, our vision is to expand around the world and be globally recognized as a high quality Indian food brand with introducing more variety in the future.

Austin's state of the art production facility, installed with USFDA approved European machinery is spread over 40,000sqm. It follows the norms of FSSAI, BRC, HACCP, US FDA and HALAL to produce 3,60,000 units of cans per day. In other words, Austin promises a seamless supply of good quality food.

Austin is committed to deliver natural and healthy products at a reasonable price to the end consumers. Austin sources the best quality of Pulses, Vegetables, Fruits and all other ingredients; it is equipped with hygienic storage and dispatch facility to consistently meet the commitments to the end consumers.

Fresh ingredients to healthy canned food that tastes awesome

Quality Assurance

All the stages in process are subjected to strict Quality Control where both human and mechanized handling efficiency are measured. Mandatory internal food tests are conducted by experienced food technologist both in the in-house as well as third-party labs.

The in-house lab has been developed as per international food safety standards along with a system for periodic quality control report to ensure no deviation in taste and quality. There are quality control processes for the brine and syrups which ensures the right saline composition on consistent basis.

Microscopic details, such as PH level, are supervised at each progressive stage. At the end of thermal process, sterilized products are delivered in glass jars as well as in food grade lacquer cans with longer shelf life. The longer shelf life of 18 months to 48 months ensures that consumers can store our products conveniently at ambient temperature.

Sterilization

In order to achieve long term microbial stability in foods, it is necessary to inactivate the highly heat-resistant bacterial spores. Hence, high temperature range of 120-150 degree Celsius which are well above the boiling point of water is achieved by using water (or steam) under pressure in specialized equipment.

Austin uses 'in-container' sterilization process. The cans, jars or other containers are filled with foods and sealed. The packed containers are then heated by using water (or steam) under pressure until heat penetrates the product through the container; both product and container are sterilized together.

Sterilized Pulses

A variety of pulses that are easy to store and cook. Healthy and rich source of protein. The entire range available in Cans and Glass Jars. The pulses are canned with brine to retain their natural taste.

Chick Peas

Red Kidney Beans

Green Peas
